BIOPORT® CROSSLINK 2%

It is a sterile viscoelastic solution for intra-articular injection, the two cross-linked biological polymers, sodium hyaluronate and chondroitin sodium sulfate involves.

60 mg hyaluronic acid per syringe (20 mg / ml)

90 mg chondroitin sodium sulfate (30 mg / ml)

3 ml pre-filled syringe

Composition	Sodium hyaluronate, Chondroitin sodium sulfate
Concentration	60 mg/90 mg/3ml 2%/3%
Administration total	1 syringe at 6 months
Average molecular weight	3MDa
Elasticity mode G' in rest 0,5 Hz / running 2,5 Hz.	242 Pa / 468 Pa
Viscosity mode G" at rest/running	180 Pa/220 Pa

BIOPORT® CROSSLINK 2% | PROPERTIES

Only one injection per treatment

Highly concentrated: 60 mg hyaluronic acid per syringe with chondroitin for cartilage tissue

BD

Delivered in pre-filled glass syringe Becton Dickinson

BIOPORT® CROSSLINK 2%

CHONDROITIN SULFATE

Protects the cartilage and decreases inflammatory activity in the region affected by osteoarthritis (OA).Contributes to physical cross-linking of the hyaluronate chains being binded thereto in a 1:1 ration, increasing in this way the properties of sodium hyaluronate.

INDICATION

- As a viscoelastic supplement or as a replacement for the synovial fluid in the knee joint
- For the symptomatic treatment of mild to severe knee osteoarthritis

EFFECTS

- Pain relief
- Improvement of joint mobility
- Protection of the cartilage

APPLICATION

A single injection of the product restores the protection of the joint through good lubrication and shock absorption and leads to a significant improvement in symptoms.
